## About the Workshop

This UMCCed Workshop with practical training session, held in collaboration with GPAM and ZESB, aims to provide participants the "Learn & Do" in limiting domestic solid waste for final disposal. A solid waste stream dominated by organic waste and inorganic materials will create environmental hazards and a source separation must be carried out:

- inorganic for recycling;
- organics for composting; and
- other hazardous waste for safe treatment and disposal and that all these waste are to be diverted from landfills.

## Benefits of the Workshop

The goals of this Workshop are:

- to provide awareness that domestic solid waste problems are contributed by the consumers' attitudes and actions;
- to disseminate the four-step approach to domestic solid waste management: recover, reduce, reuse and recycle;
- to show-case ways where consumers can play major roles in reducing domestic solid waste problems; and
- to provide a platform for networking among multi-stakeholders for latest information exchange and technology updates on domestic solid waste management.
